

Compost

A Profitable Season Starts with Healthy Soil

Conventional growers use McGill AG for one reason — it works.

We offer results ... end of story.

Simply put, when farmers return composted organic matter, active soil microbes, and organic nutrients to the fields, good things happen — so good, in fact, that at the end of the season, you'll return more money to your pocket.

Compost is also good for the environment. It controls erosion and pollutant runoff, conserves energy and returns carbon to the soil instead of allowing it to become air pollution, so you can feel as good about the way you grow food as you do about feeding people and turning a profit. Try McGill AG on your worst field, and you'll be convinced.

- + See results with as little as 4-8 tons per acre or about a 1/8-inch layer of compost
- + Apply with standard spreaders
- + Base your application rate on soil tests and compost analysis for best results

STA Certified
COMPOST
A program of the US Composting Council

No-till Row crops Open ground

- Soil amendment
- Top dressing
- Banded row
- Mix ingredient

For transplants and plasticulture, we recommend McGill SoilBuilder®. Your horses may prefer SoilBuilder® on their hay and pastures, too. Ask your sales representative for details.

McGill Advantage...

Our composts are manufactured using a scientific enhancement of nature's own recycling process that delivers:

- + **Higher yields with fewer chemicals**
Create healthier soil structure and increase organic matter essential to key soil processes and organisms
- + **More water where you need it**
Improve growing conditions by boosting the water-holding capacity of your soil and keeping more moisture at the root zone
- + **Improved drainage**
Reduce the impact of overwatering or water-logging after heavy rain through increased pore space, allowing water to percolate quickly
- + **Slow release**
Get more nutrients to the root zone and hold them there for slow release through high Cation Exchange Capacity (CEC)
- + **Reliable performance**
Depend on year-round supply and consistent results due to our high volume, climate-controlled processing

Compost saves money!

- Reduces fertilizer requirement
- Reduces compaction promoting root growth
- Reduces reliance on synthetic chemicals
- Increases moisture retention
- Increases crop yields
- Increases resilience to environmental stresses and droughts

What Growers Say About Our Compost

"Less expensive than fertilizer. Better yields last year with corn and beans. Seems to work better overall than fertilizer."

*- Earl Smith, David and Ryan Kennedy
- Smith Farms, Hope Mills, NC*

"Excellent crop response ... the compost seems to last longer with less leaching than commercial-grade fertilizer."

- Britt Riddle - Riddle Farms, St. Pauls, NC

"The organic matter compost provides is priceless ... it makes me money!"

*- Tony, Wayne and Aaron Wilson
- Tri-W Farm, Clinton, NC*
