## USING **McGILL** *LandscapeMix*

**Raised plant and vegetable beds:** Build by planting directly into *LandscapeMix* Premium Compost or mix with existing native soils. Small amounts on a yearly basis will help replenish your soil with the nutrients your plants and vegetables need to thrive and survive.

**Planter Blends and mixes:** McGill *LandscapeMix* can be used in planters by itself or blended with other planter media, for a healthy and organic planting environment.

**Trees and shrubs:** Dig a hole the same depth as the root ball and two to three times as wide. Fill with McGill *LandscapeMix* - place the plant in the planting hole, firm the soil as the hole is backfilled and water thoroughly.

**Topdressing & turf renovation:** Apply 1/8 to 1/2 inch of *LandscapeMix* - seed or sod if needed and water. Optimal results when combined with core aerating area to be amended.

McGill *LandscapeMix* is a blend of McGill *SoilBuilder* Premium Compost and amendments, creating the perfect planting media for a variety of planting options.

McGill *LandscapeMix* is **STA Certified** and meets all three elements of the **USCC's Consumer Compost Use Program**.

True sustainability **BEGINS** and  
**ENDS** with **COMPOST**
